

*Smart financially. **Better naturally.***

Introducing:

BioWest's Stubble Digester, the smart and affordable way to reduce stubble while improving soil quality.

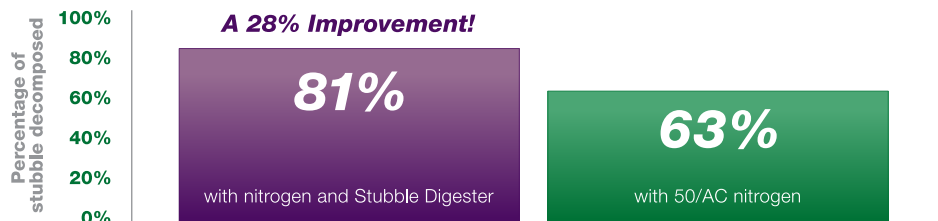

Stubble Digester[™]

by **BioWest**
Ag Solutions 

Stop spending more to get less.

With the soaring costs of conventional fertilizer, **BioWest's Stubble Digester** makes more sense than ever. Our natural, non-petroleum blend of active microbes specialized for "feeding" on crop residue, accelerates Mother Nature's digestion process – improving your seed bed and your bottom line.

Simple solution. Significant savings.

Apply **Stubble Digester** in late summer or early fall and, by spring, get a seed bed full of decomposed residue ready to work for you, not against you. Even better, Stubble Digester is less expensive than extra nitrogen. How? By reducing the nitrogen you must apply while also allowing you to take advantage of nitrogen and other essential nutrients that are released as Stubble Digester works toward balancing the C:N ratio. And because it can be integrated easily with your current process, implementing Stubble Digester is simple.

To take maximum advantage of the benefits of Stubble Digester, Mother Nature requires that we think well ahead. Simply put, we're "buying" time and heat from this year to prepare us for next year.

To learn more about application timing and costs, contact your BioWest field representative today!
